

TECEdrainline Maintenance Instructions

The body of the TECEdrainline gutter is made of stainless steel and the drain channel is smooth without any gaps, screws or corners. Therefore, hair, soap scraps or other contaminants cannot settle on the surface of the trough body. But in case dirt settles, the duct can be easily cleaned with a soft cloth.

Simply remove the anti-odor tube from the body of the siphon and rinse the "self-cleaning" waste with water from the shower head. Do not use any aggressive or abrasive cleaning agents to clean the gutter body, as they could damage the surface of the 1.4301 stainless steel (AISI 304).

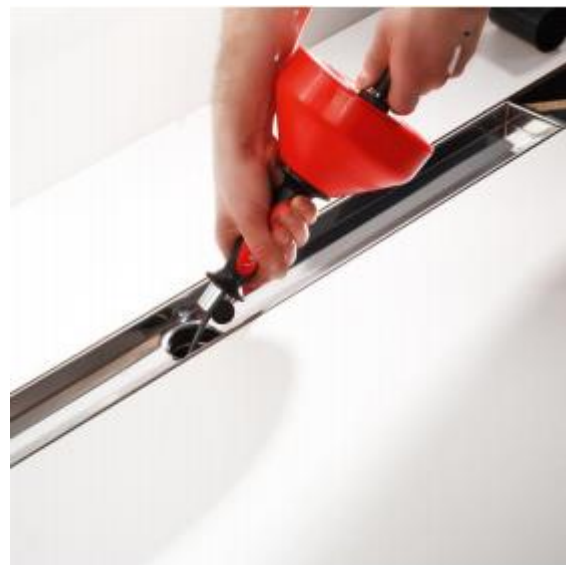

To rinse the siphon, remove the anti-odor tube

Lift the cover with a key (included in the delivery package)

If the drain pipe becomes clogged, the pipe can be cleaned with a small manual cleaning spiral. The mark inside the siphon indicates the direction of the outflow.

Clean the waste pipe with a small manual spiral

Clean the body of the gutter with a soft cloth - do not use aggressive or abrasive cleaning agents
